

## Module: m/00/120

*'The timeware® application overview...'*

**All** eleven timeware® applications should be installed on the timeware® server.  
(module: m/01/003)

You can specify which timeware® applications are installed on each timeware® client.  
(module: m/01/010)

### timeware® 2012

This is the main application and should be installed on the timeware® server and all timeware® clients.

### Attendance Display Panel

This application provides a real-time 'in' or 'out' status of selected personnel. This application should be installed on the timeware® server and a timeware® client in a reception area.

### Alert Centre

This application provides a real-time update of the status of each door connected to the timeware® system. Personnel movement through each door can be viewed along with any alarms such as door forced and door ajar. This application should be installed on the timeware® server and a timeware® client in a security monitoring area.

### Application Manager

This application is used when connecting the timeware® application to the SQL database. It is also used during the version upgrade routines. This application should be installed on the timeware® server only.

### Report Designer

This application is used when designing new reports. This application should be installed on the timeware® server and the timeware® clients of staff that wish to develop new reports.

**For notes on the function of each of the following applications/services, please refer to module m/00/003.**

Fire Roll Call

### **Fire Roll Call**

This application should be installed on the timeware® server only.
